EXPERIENCE

SECOND PILLAR CONSULTING

Glen Allen, VA

Investment Technology Intern

2025 - 2025

- Researched the Black-Litterman model to determine data requirements for Python implementation
- Designed objects to abstract financial data for ease of data manipulation and to support scalable statistical analysis
- Optimized code performance to efficiently process large financial datasets used in investment decision-making

WEBSTER BANK

Stamford, CT

Private Banking Summer Analyst

2024 - 2024

- Interpreted macroeconomic trends to identify investment themes and inform strategic asset allocation decisions
- Analyzed portfolios totaling over \$2 billion AUM to determine how managers generated excess returns
- Evaluated valuation multiples to identify investments aligned with client income and risk profiles

DOMINGUEZ WEALTH MANAGEMENT SOLUTIONS

Williamsburg, VA

Wealth Management Intern

2023 - 2023

- Engaged in client meetings to assess risk tolerance and determine portfolio allocation
- Projected Social Security income in Excel to assist fixed income positioning
- Gathered insights on various investment products to inform investment decisions and client recommendations

PROJECTS AND COMPETITIONS

FACTOR ORIGINALITY PROJECT

In Progress

- Implementing published equity characteristics across factor themes via portfolio construction and factor return calculation
- Identifying incremental information gain and redundancy using correlation, spanning regressions, and LASSO

EXPLAINING MARKETS

In Progress

- Building an agentic AI system to predict earnings announcement returns in a real-time, out-of-sample competition
- Architecting a pipeline that incorporates historical earnings and global/industry rules to generate return predictions

CME FUTURES TRADING CHALLENGE

2026 - 2026

- Earned a 12% return over four trading days, ranking in top 10% of approximately 3,000 participants
- Developed investment theses using economic data releases, including CPI and jobless claims data

IMC PROSPERITY 4

2026 - 2026

- Designed and tested market-making and statistical arbitrage strategies in a simulated exchange environment
- Applied Kalman filtering techniques for real-time fair value estimation
